SAY NO TO DRUGS

SAY NO TO DRUGS

What Are Drugs?

Medicinal Use ✓

Drugs prescribed by a doctor to treat illness, manage pain, or support recovery. When used correctly, they heal and help.

Harmful Use ✗

Taking substances without medical need – or in excess – to alter mood, feeling, or perception. This leads to dependence, damage, and danger.

Simple Definition: A drug is any chemical substance that changes how the body or mind functions. The difference between medicine and poison is often purpose and dosage.

Drug abuse is when someone uses a substance in a way that harms themselves or others – regardless of whether it started as a prescription.
